

GRUNDFOS DPK RANGE, 50 HZ

EFFECTIVE DRAINAGE

– when and where you need it

If you're working with building services, courts drainage, or with any application requiring reliable drainage, the DPK range will remove all rainwater and ground water.

HIGH PRESSURE AND RELIABLE RAINAGE PUMPS

– designed for your varied needs

The DPK range of submersible drainage pumps from Grundfos provides surface water drainage, combining installation flexibility and high-pressure capabilities with reliability and ease of service.

The DPK range presents a surprisingly compact design, considering the pressure capabilities on offer. Together with the solid cast-iron construction and available installation options, the DPK range is perfect for drainage pit applications.

Flexibility characterizes the DPK range. Simply install the pump on an auto-coupling rail or use free-standing with a flexible hose or flange connection for an incredibly easy to service, costeffective drainage solution.

APPLICATION

- Underground drainage pit
- Storm water transit
- Flood Control
- Seepage water
- Surface water with small solids

DPK PUMP FEATURES – and what they offer you

MOTOR PROTECTION

Built-in bi-metal sensor protects against overheating.

SHAFT SEAL

The double mechanical seal is positioned in the oil chamber and ensures trouble-free operation.

EASY MAINTENANCE OIL PLUG

The ability to inspect oil condition in the seal chamber makes it easy for you to plan maintenance and service your pump.

FLANGE OR HOSE CONNECTION

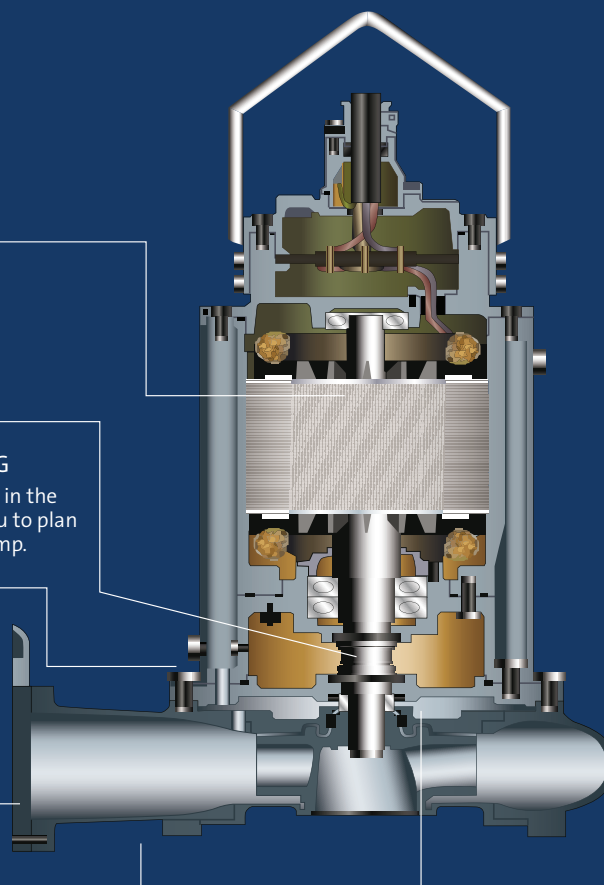

The ability to inspect oil condition in the seal chamber makes it easy for you to plan maintenance and service your pump.

AUTO-COUPLING OR RING STAND

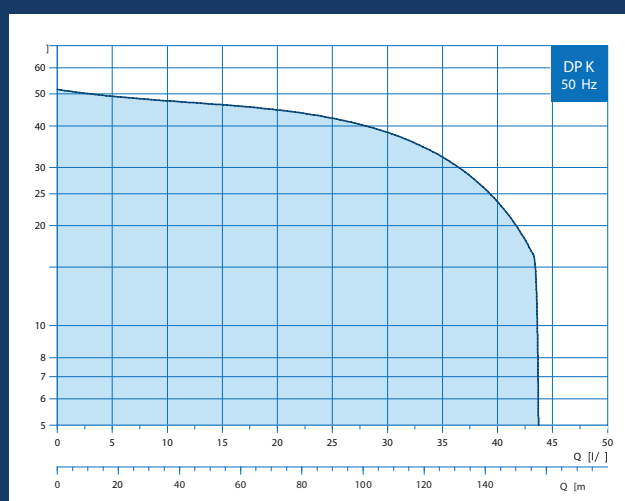

Flexible submerged installation options increase versatility, with autocoupling guide rails or free-standing options available.

HIGHLY EFFICIENT IMPELLER

The ductile cast iron impeller maintains its performance, ensuring an increased lifetime.
